

AWS Task-4

Task Description:

Launch an EC2 instance (Linux and Windows) along with a web server. Then, create an EBS volume of 5 GB, attach it to an EC2 machine (Linux and Windows), and take a snapshot. Finally, create an EBS volume using the taken snapshot.

Solution:

✓ 1. Launch EC2 Instance (Linux + Windows)

The screenshot displays the AWS Management Console's EC2 Instances page. On the left, a navigation sidebar shows options like Dashboard, EC2 Global View, Events, and a list of instance types and templates. The main area shows a table of instances. Two instances are listed: 'Windows-VM' (i-018cc12f3ad20d219) and 'Ubuntu-VM' (i-006df616644a8cdd7). Both are in a 'Running' state. The 'Ubuntu-VM' details are expanded, showing its Instance ID, Public IPv4 address (13.204.79.35), and Private IPv4 addresses (172.31.14.135).

The screenshot displays the AWS Management Console's EC2 Instances page. On the left, a navigation sidebar shows options like Dashboard, EC2 Global View, Events, and a list of instance types and templates. The main area shows a table of instances. Two instances are listed: 'Windows-VM' (i-018cc12f3ad20d219) and 'Ubuntu-VM' (i-006df616644a8cdd7). Both are in a 'Running' state. The 'Windows-VM' details are expanded, showing its Instance ID, Public IPv4 address (3.110.47.129), and Private IPv4 addresses (172.31.1.207).

- Successfully created EC2 Instances for Linux and Windows.

✓ 2. Install Web Server

The screenshot shows a web browser window with the address bar displaying '13.204.79.35'. The page content includes the Ubuntu logo and the text 'Apache2 Default Page' and 'It works!'. The browser's address bar shows 'Not secure' and the IP address '13.204.79.35'.

- Connected to the Linux EC2 instance using SSH.
- Then, I installed Apache web server.

- Connected to the Windows EC2 instance using RDP.
- Then, installed the IIS web server.

✓ 3. Create EBS Volume of 5 GB

- Created an EBS volume of 5 GB from the Elastic Block Store.

✓ 4. Attach EBS Volume to EC2

- Selected the created EBS volume and attached it to my Linux EC2 instance.

- Used device name `/dev/xvdbf`.

```
root@ip-172-31-14-135:~# lsblk
NAME        MAJ:MIN RM  SIZE RO TYPE MOUNTPOINTS
loop0       7:0      0  27.2M 1 loop /snap/amazon-ssm-agent/11320
loop1       7:1      0  73.9M 1 loop /snap/core22/1981
loop2       7:2      0  50.9M 1 loop /snap/snapd/24505
xvda        202:0    0   8G  0 disk 
├─xvda1     202:1    0   7G  0 part /
├─xvda14    202:14   0   4M  0 part 
├─xvda15    202:15   0  106M 0 part /boot/efi
└─xvda16    202:16   0  913M 0 part /boot
xvdbf       202:14592 0   5G  0 disk 
root@ip-172-31-14-135:~#
```

```
root@ip-172-31-14-135:~# mkdir /mnt/mydata
root@ip-172-31-14-135:~# mount /dev/xvdbf /mnt/mydata
root@ip-172-31-14-135:~# df -h
Filesystem      Size  Used Avail Use% Mounted on
/dev/root        6.8G  2.0G  4.8G  30% /
tmpfs            479M   0  479M   0% /dev/shm
tmpfs            192M  892K  191M   1% /run
tmpfs            5.0M   0   5.0M   0% /run/lock
/dev/xvda16     881M   66M  734M  11% /boot
/dev/xvda15     105M   6.2M   99M   6% /boot/efi
tmpfs           96M   12K   96M   1% /run/user/1000
/dev/xvdbf       4.9G   24K   4.6G   1% /mnt/mydata
root@ip-172-31-14-135:~#
```

- Then I connected to the Linux EC2 instance, formatted, and mounted the volume for testing.

- Selected the EBS volume and attached it to my Windows EC2 instance.

- Logged in via RDP, opened Disk Management, initialized the new disk, formatted it, and assigned a drive letter.

- The volume was successfully attached and usable.

✓ 5. Take Snapshot of the Volume

The screenshot shows the AWS Management Console interface. The top navigation bar includes the AWS logo, a search bar, and the user's name 'Vignesh marimuthu'. The left sidebar shows the navigation menu with 'EC2' selected. The main content area displays the 'Create snapshot' page. Under 'Resource type', 'Volume' is selected. The 'Volume ID' field shows 'vol-021fc880d86cc267 (5GB Volume)'. Below this, a table titled 'Snapshots (1/1)' shows a single snapshot: 'Volume Snap' with ID 'snap-055529bcbf6b0ab', size '152 MiB', volume size '5 GiB', description 'MyVolume-Snap', storage tier 'Standard', and status 'Completed'.

- Created a snapshot of the EBS volume from Volumes.

✓ 6. Create New EBS Volume from Snapshot

The screenshot shows the AWS Management Console interface. The top navigation bar includes the AWS logo, a search bar, and the user's name 'Vignesh marimuthu'. The left sidebar shows the navigation menu with 'EC2' selected. The main content area displays the 'Create volume' page. Under 'Volume settings', the 'Snapshot ID' field shows 'snap-055529bcbf6b0ab (Volume Snap)'. Below this, a table titled 'Volumes (1/5)' shows a list of volumes. The 'VOL-Snap' volume is selected, with ID 'vol-059a59f8fa983a8e', type 'gp3', size '5 GiB', IOPS '3000', throughput '125', and snapshot ID 'snap-055529bcbf6b0ab'.

- Created the new volume from the snapshot.
